### Spy Sweeper Enterprise— Spyware protection for your business

Spyware is a pervasive, colossal security risk. Legacy anti-virus security solutions simply don't offer the level of protection today's enterprises require to defeat the widespread threat posed by malicious Trojans and system monitors that are designed to steal confidential data for financial gain. The reason is simple: spyware is a dynamic threat that requires a dedicated solution to defeat it.

Webroot Spy Sweeper Enterprise is an award-winning, centrally managed, scalable enterprise solution that provides best of breed protection against all types of malicious spyware, adware, and other harmful intruders. Spy Sweeper Enterprise comprehensively detects and removes existing spyware, and blocks new threats before your employees can unwittingly infect their PCs.

#### How Spy Sweeper Enterprise Works

Spy Sweeper Enterprise provides a distributed anti-spyware solution using a client/server architecture with centralized management and reporting. The optional deployment of update distribution servers allows large organizations to load balance client updates, while also enabling multi-site companies to conserve bandwidth by distributing updates from servers located on the same LAN. With Spy Sweeper Enterprise, IT administrators can configure security policies and sweep settings by individual workstation, specific groups of users, or company-wide.
